I got project from my client to update that project with some points. But I'm facing problem to run this project.

I install npm and all required node modules downloaded based on package.json information.

```
{
  "name": "acelle-builder",
  "version": "1.0.0",
  "description": "",
  "private": true,
  "type" : "module",
  "scripts": {
    "test": "echo \"Error: no test specified\" && exit 1",
    "build": "webpack"
  },
```

there are some codes of importing html files like

```
import controls from './controls.html';
import widgets from './widgets.html';
```

but when I run this project using node command I'm getting error with unknown file .html extension.

How can I solve this?

javascript

node.js

modules.  
which involves importing other kinds  
an appropriate tool. The  
json file include WebPack. Use  
( build ) listed that will run it.

wanted to run this application with unminified source files so that I can add some extra features and check output instantly . – [Sam](#) Jun 5, 2021 at 5:42

You can't. It isn't written in plain JS, you *need* the bundler to run. – [Quentin](#) Jun 5, 2021 at 9:29
